Auxiliary Fixed Eight Light

GS-0016

The GeoVISION™ Auxiliary Fixed Eight Light is designed to provide supplemental lighting in large bores or bores with very dark walls. The light clamps on the cable and is small enough to fit inside a 6 inch (15 cm) bore.

Moving the light source away from the camera increases visibility in turbid water and enhances the view of the bore wall by casting shadows. The Auxiliary Fixed Eight Light can be placed anywhere on the cable for optimal lighting in any bore.

Our lights are rated for depths of up to 2,000 feet (600 meters) underwater and pressures up to 1,000 psi.

Specifications:

| | |
|---------------|-----------------------|
| Weight | 10 Ounces (283 grams) |
| Diameter | 4.25 inches (10.8 cm) |
| Length | 6.5 inches (16.5 cm) |
| Maximum Depth | 2,000 feet (600 m) |
| Batteries | 16 x AA Alkaline |

Compatibility:

All Cameras

All Winches
